Additional Sanitary Inspector.

E. H. NORFOLK, - - - Senior Clerk.

Miss E. P. JOHNS - - - Junior Clerk.

Miss A. M. KLUE, S.R.N., S.C.M., H.V.CERT. - Health Visitor.

Miss A. KENNEDY, - Health Visitor (PART TIME).

Miss R. M. GOODEY - M. & C.W. Clerk,

CLACTON URBAN DISTRICT COUNCIL

PUBLIC HEALTH DEPARTMENT,
TOWN HALL,
CLACTON-ON-SEA.

JUNE, 1948.

TO THE CHAIRMAN & MEMBERS OF THE CLACTON URBAN DISTRICT COUNCIL

LADIES AND GENTLEMEN,

I have the honour to present the Annual Report respecting the health and sanitary conditions of your District during 1947.

The Vital Statistics are based upon the Registrar General's estimated population for 1947, which is 21.960.

During the past year, 1947, the health of the District has again been good.

Special attention is drawn to the comparative statistics on Page 6 which shows how favourably those of Clacton compare with England & Wales as a whole.

The outstanding features are:

- t. The absence of Maternal deaths for the third successive year.
- 2. The Infantile Mortality under 30,
- 3. The complete freedom from Puerperal Fever and Pyrexia.

The infectious disease rate is also very low: Measles being the only disease showing any degree of prevalence, whilst the absence of Diphiheria is noteworthy and reflects with the national statistics the importance of Anti-diphiheritic inoculations of which still too few parents take advantage.

It gives me much pleasure to express my thanks for the help and assistance I have received from the Senior Sanitary Inspector and Public Health Staff.

I am,

Your obedient Servant,

J. RAMSBOTTOM.

SECTION A.

STATISTICS & SOCIAL CONDITIONS OF THE AREA

| GENERAL ST | TATISTICS | ; ; | |

DEATHS AT VARIOUS AGES DURING 1947.

| Under 1 year | ii |
|-----------------------|---|
| 1 and under 2 years | • |
| 2 and under 5 years | 2 |
| 5 and under 15 years | 3 |
| 15 and under 25 years | 3 |
| 25 and under 35 years | 2 |
| 35 and under 45 years | 5 |
| 45 and under 55 years | 15 |
| 55 and under 65 years | 50 |
| 65 and under 75 years | 106 |
| 75 and upwards | 139 |
| | |
| Total | 336 |

There has been an increase of 41 in the number of deaths as compared with last year. The increase has been evenly distributed between the age groups with the exception of persons between 55 and 65 years of age. This latter group shows an increase of 18.

CAUSES OF DEATH DURING 1947.

| | | | | Male | Female | Total |
|-----------------------|-------|---------|-------|-----------|---------------|---------|
| Pulmonary Tubercul | losis | | | 5 | 2 | 7 |
| Encephalomyelitis | | | | | 1 | 1 |

| Cancer | | | | 33 | 27 | 60 |
| Diabetes | | | | - Charles | 2 | 2 |
| Intracranial Vascular | | | | 23 | 29 | 52 |
| 71 (5) 1 | | | | 58 | 54 | 112 |
| Other Diseases of Cir | | | | 9 | 11 | 20 |
| 15 3 111 | • • • | ~ | • • • | 4 | 11 | 15 |
| 13 | | | | $\hat{2}$ | 2 | 4 |
| Other Respiratory Di | | | | 1 | | 1 |
| Ulcer of Stomach or | | | | 2 | \dot{i}_{1} | 6 |
| Diarrhoea | | | | ~ 1 | | 1 |
| Other Digestive Disea | 1563 | • • • • | | 3 | 4 | 7 |
| Nephritis | | | | 2 | 1 | 3 |
| Premature Birth | | • • • | | ~ 4 | 3 | 7 |
| Con. Malformation, | | | | 3 | 1 | 4 |
| Suicide | | | • • • | 4 | 1 | 5 5 |
| Road Traffic Acciden | | | • • • | 4 | 1 | 1 |
| Other Violent Causes | | * * * | • • • | 3 | 1 | 1 // |
| All Other Causes | | | • • • | | 0 | 13 |
| All Other Causes | • • • | | • • • | 4 | ϑ | 1.9 |
| | | | | 469 | 160 | 996 |

The above table shows that the increase of 41 in the number of deaths can be mainly accounted for by an increase of 33 over last year in those persons dying from heart and circulatory diseases.

INFANTILE DEATHS

The following table shows the cause of, and the ages at death, of the 12 infantile deaths registered:—

| | Under 1 day | l day to l wk. | l wk. to l mth. | l to 2 mths. | Mor 2 4 | 6 12 | Total |
|--|-------------------|----------------------|-----------------------|--------------------|------------|------|-------|
| Diarrhoea Asthenia Haemorrhage from Umbilicus Blue Asphyxia Intracerebral | 2 | 1 | 3 | | ı | | 1 |
| | 3 | 3 | 4 | 1 | 1 | | 12 |

Since the majority of infantile deaths occur in children under one month old, it would appear that any appreciable reduction in the infantile mortality rate can now only be made in infants of that age.

Further, since the great majority of these early deaths are due to prematurity, the practical solution seems to be the concentration upon the care and management of all premature infants until they reach the age of 3 months with hospital treatment if necessary.

COMPARATIVE STATISTICS.

Comparative Statistics, Clacton Urban District and England & Wales as a whole, 1947:—

Rates per 1,000 population.

| | C.U.D.C. | England & Wales | |
|---|---------------------------|--|-----|
| Birth Rate Death Rate Infantile Mortality Maternal Mortality | . 15.3 . 29.77 | 20.5 12.0 41.0 per 1,000 Live Birth: 0.85 Live Births & Still Births | IJ. |
| Deaths Diarrhoea (under 2 years of age) Influenza Infectious Disease Notifications per | 2.48 | 5.8 per 1,000 Live Birth: 0.09 | S |
| 1,000 population:— Scarlet Fever Diphtheria Erysipelas Whooping Cough Measles Puerperal Fever & Pyrex | Nil 0.13 0.5 6.3 | 1.37 0.43 0.49 2.22 9.44 7.46 per 1,000 Live Birth | 15. |

In comparing the Urban District statistics with those of the Country, the low incidence of Infectious Disease with the complete absence of Diphlheria will be noticed.

The outstanding feature however, is the statistics relating to Mct rulty and Child Welfare, that is, the low infantile mortality which is less than \(\frac{3}{4} \), and particularly the absence of puerperal fever and pyrexia.

SECTION B.

GENERAL PROVISION OF HEALTH SERVICES

Medical Officer of Health (Temporary): J. RAMSBOTTOM,

M.B., CH.B., D.P.H.

Also Assistant County Medical Officer, and Medical Officer for Brightlingsea U.D.C., Frinton & Walton U.D.C., and Tendring R.D.C.

LABORATORY FACILITIES.

Bacteriological work is carried out at the Pathologist Laboratory, Essex County Hospital, Colchester.

Water and Ice Cream samples are examined at the Counties Public Health Laboratories, 66, Victoria Street, London, S.W.1.

Examination of Milk is dealt with at the Essex Institute of Agriculture, Writtle, Nr. Chelmsford.

AMBULANCE FACILITIES.

Urban District Service.

Two Ambulances with permanent staff are housed at the Depot, Old Fire Station, Old Road, Clacton.

There is also one St. John's Ambulance which is maintained on a voluntary basis.

Infectious Disease.

All cases of Infections Diseases are conveyed to the Colchester Borough Hospital in that Institution's Ambulance.

NUBSING HOMES.

In Clacton Urban District, there are 3 Nursing Homes registered under the County Schēme.

Ellisdene Nursing Home, Clacton.

(Private) ... 11 beds, 7 being for maternity cases.

Waltham Nursing Home, Holland-on-Sea.

(Private) ... 6 beds, 4 being for maternity cases.

Woodboro' Nursing Home, Clacton. ... 5 beds.

(See the D.N.A.'s Maternity Home on page 8)

CLINICS AND TREATMENT CENTRES.

Child Welfare.

The main clinic is provided at the combined Clinic premises, Skelmersdale Read, Clacton. This Clinic is centrally situated, and there are three sessions each week:—

Thesday morning — 9.30 - 12 noon.
Thursday morning — 9.30 - 12 noon.
Thursday afternoon — 2 p.m. - 4 p.m.

At the latter Session, the Maternity and Child Welfare Medical Officer is in attendance.

In addition to the central Clinic, smaller subsidiary Clinics

are held at flolland-on-Sea and Jaywick.

Ante Natal Clinic.

Sessions are held each Tuesday afternoon at 1.30 p.m. at the combined Clinic, Skelmersdale Road, Clacton.

Women's Welfare Clinic.

One session monthly is held at the Central Clinic between 10 a.m. and 12 noon on the fourth Monday in the month.

In addition to the above, there are special Clinics for infants under 5 years held at the Central Clinic premises as follows:—

Immunisation Clinic (Diphtheria and also Whooping Cough). 1st Monday in the month 10 a.m. — 11 a.m.

OPHTHALMIC CLINIC.

4th Monday in the month (in conjunction with the Essex C.C.)

ORTHOPAEDIC CLINIC (Masseuse).

1st and 3rd Tuesdays in the month between 2 p.m. and 4 p.m. also in conjunction with the Essex C.C.)

DENTAL CLINIC.

Arrangements also exist for the Dental treatment of both Mothers and Infants.

Home Nursing.

This is carried out by the Local District Nursing Association which is subsidised by the Conneil, and employs 4 District Nurse Midwives.

Midwives.

Four District Nursing Association Midwives only.

Maternity Home.

The local District Nursing Association also provides a small bid well equipped Maternity Home consisting of 5 beds with a suitable resident nursing staff, where the Mothers can be cared for under the best of conditions.

MATERNITY & CHILD WELFARE - CLACTON-ON-SEA

THIRTY-TWO YEARS PROGRESS

Towards the end of the nineteenth century, public opinion became shocked with regard to the very high infantile mortality

prevalent in this country.

The practical outcome of this movement was the establishment by purely voluntary bodies what were the equivalent of our modern Child Welfare Clinics. Such a Clinic commenced operating in Clacton as early as 1916, and was held in the Baptist Chapel, Pier Avenue. The staff consisted of 14 voluntary workers and a Sister Superintendent (Mrs. Bennett). This Clinic appears to have been much appreciated and to have laid a sound foundation to Clacton's Maternity and Child Welfare Service.

The Notification of Births (Extension) Act of 1915 made the notification of births to the local Medical Officer of Health compul-

sory, and it was necessary for the Conneil is appoint a Health Visitor to follow up each notification.

The Malernity and Child Welfare Act of 1918 went further and placed upon all Local Authorities the obligation of making provision for the care of Mothers and Infants under 5 years of age, in consequence of this legislation, the Clacton Council on the 1st April 1919, took over the control of the then existing Welfare Centre in Pier Avenue from the Voluntary Committee who had organised and ran it.

The two separate posts of Health Visitor and Superintendent of the Welfare Centre were combined in 1920, and the former was given the charge of the Malernity and Child Welfare Centre in addition to her duties under the Notification of Births Acts.

As the attendances increased, the present quarters in Skelmersdale Road were acquired and the Welfare Clinic was transferred there.

In 1922, a branch Clinic was opened at Rush Green: this was, however, closed 5 years later.

In 1925, the small Maternity Ward was opened on the 1st Floor of the Skelmersdale Road Clinic under the Clacton District Nursing Association. Previously, these upper rooms had been used as a flat. The Chnic itself was used for the Minor Ailments of School children, and with the increasing development of the School Medical Service, it was found necessary to extend: consequently the premises were enlarged in 1928 to their present extent.

With this extension, the Skelmersdale Read Clinic gradually grew by co-operation with the County Council into the combined Clacton Urban District and County Clinic. In addition to the Malernity and Child Welfare activities, accommodation was found for the Tuberculosis Clinic, and further services were added as the various schemes developed. These special Clinics were available to both School children (County) and the molhers and children attending the Clacton Maternity and Child Welfare Clinics. This combined development did not retard the gradual extension of Clacton Maternity and Child Welfare scheme, but to relieve the pressure at the Centre, a branch Infant Welfare Clinic was opened at Holland-on-Sea in 1944, and now arrangements have been made for a further branch Clinic at Jay-Wick in order to avoid any necessity for the curtailment of activities in respect to the numerous special Clinics held at the Centre in Skelmersdale Road.

The efficiency of the Urban District's scheme is confirmed by the fact that Clacton has retained control of Maternity and Child administration from its inception in 1919 down to the present time. When on July 5th, 1948, under the National Health Act 1946, the Essex County Council becomes the local Maternity and Child Welfare Authority, Clacton Urban District will be able to hand over to that Authority what is virtually a Health Centre under the Act which at the same premises in Skelmersdale Road provides accommodation for the following:—

Child Welfare Clinics C.U.D.C. E.C.C. Minor Ailments Clinics C.U.D.C. & E.C.C. Ophthalmic Clinics C.U.D.C. & E.C.C. Orthopaedic Clinics C.U.D.C. Ante-Natal Clinics C.U.D.C. Women's Welfare Clinics Tuberculosis Clinics E.C.C. C.U.D.C. & E.C.C. Dental Clinics E.C.C. Psychiatric Clinics

—and in addition, on the first floor:—
a small Maternity Ward (Clacton D.N.A.).

There is little doubt that this is no mean achievement, although the control of Maternity and Child Welfare passes out of the hands of the Urban District Council under the recent National Health Service Act.

SECTION C.

SANITARY CIRCUMSTANCES OF THE AREA.

Including the Report of the Sanitary Inspector.

WATER.

During the year 1947, the Clacton Water Department supplied 368,464,000 gallons of water, being an increase of 28,130,000 gallons over the output of the previous year. This increase is equal to 8%.

The water was obtained from: —

Tendring Hundred Waterworks Co. ... 230,686,000 gallons Great Bentley Pumping Station ... 125,955,000 ''
St. Osyth Pumping Station ... 11,823,000 ''

368,464,000

Throughout the whole of the year the water supply of the area was satisfactory in quality and quantity.

Bacteriological examinations of the water leaving the pumping Stations are made at least monthly. Precautionary treatment with Chlorine is made at pump suctions in wells, and water examined is treated water.

In addition to examinations of water at source of supply, samples of water taken from consumers' premises in various parts of the District have been submitted each month for bacteriological examination. The reports on the samples state that the water is of a high standard of bacterial purity and the results obtained are consistent with a pure and wholesome water, suitable for public supply purposes.

There is no reason to consider the water likely to have plumbo-solvent action, and have not had to take any action in respect of any form of contamination although water receives precautionary Chlorine treatment.

Out of a resident population of 21,960, less than 100 receive main water by means of standpipes which supply 28 permanent houses.

About 1,000 summer chalets in Jay-Wick obtain their water by this means, but these dwellings have only a nominal population at other times of the year.

DRAINAGE AND SEWERAGE.

New Works of Sewerage and Sewage Disposal.

The following small schemes, commenced in 1946, were completed in 1947:—

- (a) No. 4. Surface water outfall sewer, for draining part of Holland-on-Sea: 170 yards of 15" 21" sewer were laid during the year under review, and a reinforced concrete culvert and grit chamber constructed.
- (b) Bull Hill Housing Estate Sewering;
 300 yards of 6" foul and 9" surface water sewers were laid to complete the sewering of the estate.
 The following new work was commenced:—

Northern Area Drainage Scheme.

This scheme will provide main drainage in the Northern Area of the District, in which the Burrsville Estate, Thorpe Road, London Road, etc., are similate. 500 properties in that area are at present drained to cesspools.

(1) Contract No. 1.

This deals with the construction of the Main Soil and Surface water sewers to drain the area as a whole.

The Soil sewer runs from the existing outfall at Valley Farm, along Pickers ditch to a point a quarter of a mite from Thorpe Road, where it branches up towards Gorse Lane. This sewer will drain some of the properties in Burrs Road, Gorse Lane and Meadow Close. The other properties will be sewered later under the Private Street Works Act 1892, when these main sewers have been laid.

During the year under review, 600 yards of 21" dia. Soil sewer with Manholes and incidental works were completed.

(2) Contract No. 2.

This involves an extension of the main soil sewer to a point in London Road near Everitt's Nurseries to take in the sewage from Little Claeton for the Tendring Rural District Council.

With regrard to Sewage Disposal, no new work has been undertaken but the existing pumping machinery at Holland Haven is being overhauled in readiness for the working of the new Sedimentation Scheme, completed in 1941. This scheme is designed to eliminate any possibility of nuisance to the foreshore during the Summer Season through floating sewage or other foul matter.

Eradication of Bed Bugs.

Number of Infested Houses:

| (a) | Council Houses | | Nil |
|-----|----------------|------|-----|
| (b) | Other Houses | | 17 |

Number of Houses disinfested:

| (a) | Council Houses | | Nil |
|-----|----------------|------|-----|
| (b) | Other Houses | | 17 |

METHODS EMPLOYED: —

Stripping of skirtings, etc., where necessary, spraying with insecticide, fumigation with sulphur and other special fumigators. Steam disinfection of bedding.

REPORT OF THE SANITARY INSPECTOR FOR 1947

The following is a synopsis of the principal work carried out by the Sanitary Department during 1947:—

Sanitary Administration.

SECTION D.

HOUSING

During 1947, 31 Houses were erected by private enterprise and Nil by the Council. 21 Prefabricated houses were erected.

Housing complaints have been dealt with as they have arisen.

(See Sanitary Inspector's Report).

No Demolition Orders were made during the year.

2 Houses were demolished voluntarily.

Housing is the most urgent Social difficulty at the present

time which Chacton shares with the rest of the Country.

There has been no appreciable improvement during the year. The Council have 86 houses in course of erection which may

relieve the position to a certain extent.

Clacton is a comparatively modern town, and a great majority of the houses have been erected in recent times. Whilst building is essential, everything possible should be done to keep the condition of the older existing houses static by repairs and reconditioning until such times as the supply of houses actually exceeds the demand. Uninhabitable houses, of which there are a few in this district, are very difficult to deal with when it is impossible for the occupants to find other quarters.

SECTION E. INSPECTION OF FOOD

Milk Production.

The register shows there are 8 Producers (1—Accredited, 4—Tuberculin Tested, and 3—Ordinary Milk), and 16 Retailers in the District.

With regard to work carried out under the Milk & Dairies Orders, see the Sanitary Inspector's Report—Section C.

Meat.

Routine slaughtering is now done outside the District. For particulars of meat and other foods inspected and condemned, see the Sanitary Inspector's Report—Section C.

SECTION F.

INFECTIOUS DISEASE.

Below is given in tabular form the number and particulars of Infectious Diseases notified in the Urban District during 1947 : -

| Disease. Scarlet Fever Poliomyelitis Polioencephalitis Erysipelas Whooping Cough Chicken-Pox Measles (Observation) | Total Cases Notified 1 2 1 3 11 22 139 | Cases admitted to Hospital 2 2 1 — 1 — 1 — 7 | Total Deaths — — — — — — — — — |
|--|---|---|--------------------------------|
| Total | 182 | 13 | |

Infantile Paralysis.

The widespread epidemic of Infantile Paralysis which occurred in this Country during the summer of 1947, caused anxiety amongst both residents and visitors.

False runiours were in circulation respecting the number of cases that occurred in Clacton. In actual fact, the two cases that proved to be Infantile Paralysis were sporadic in character and there was definitely no epidemic.

Owing to the exceptionally hot weather experienced during the hotiday season, there were numerous cases of heat stroke amongst the visitors, particularly the children and early adolescence. Owing to the similarity of the symptoms in this condition and that of infantile paralysis, and in view of the widespread prevalence of Poliomyelitis, a few of the more suspicious cases were sent to hospital as a precautionary measure, which, there is little doubt, gave rise to the rumours referred to.

IMMUNISATION DIPHTHERIA

During 1947, 201 children between one and five years, and 4 between five and fifteen years received the full course of inoculation. 10 Children received a secondary or reinforcing injection.

The number of children of 1 year of age in 1947 was 383. About 50 per cent, of these received treatment.

TUBERCULOSIS.

Below is given in tabular form the number of new cases and the deaths from Tuberculosis during 1947:—

| | | New Cases | | | | Deaths. | | | | |
|------------|-----|-------------|-----|---------------------|----|--------------|----|---------------------|----|--|
| | | Respiratory | | Non- Respiratory | | Respirat ory | | Non- Respiratory | | |
